

Product Requirements Document (PRD)

Big Matt's BBQ – Website Refresh & Frozen BBQ Drops

Owner: Big Matt's BBQ

Target Launch: Q1 2026

Status: Approved for MVP Build

1. Purpose & Background

Big Matt's BBQ is expanding from a catering-focused business into limited-run frozen BBQ drops. The website must support both catering visibility and a preorder-based frozen product model. The frozen drop experience prioritizes clarity, capacity control, and pickup-based fulfillment.

2. Goals

- 1 Enable frozen BBQ preorders without online payments
- 2 Enforce production capacity per drop and product
- 3 Clearly communicate pickup logistics
- 4 Capture customer interest via a mailing list
- 5 Maintain a clean, low-friction catering presence

3. Non-Goals

- 1 Online payment processing
- 2 Invoice creation or accounting system integration
- 3 Shipping frozen products
- 4 Subscriptions or recurring billing
- 5 Complex catering scheduling

4. User Types

- 1 Frozen Drop Customers ordering limited-run BBQ
- 2 Catering Customers browsing menus and pricing
- 3 BBQ Fans joining the mailing list for future drops

5. Site Structure

Required pages include Home, Catering, Frozen Drops, Order Confirmation, About, and Contact.

6. Frozen Product Model

Frozen BBQ is sold as pre-packaged 0.5 lb bags. Customers select the number of bags per product. All inventory capacity is tracked in bags, with total weight derived for display purposes.

7. Drops & Inventory

Each frozen drop has configurable capacity limits per product. Once capacity is reached, ordering is disabled. Inventory enforcement must be atomic and safe against overselling.

8. Pickup & Fulfillment

Customers select a pickup location during preorder. Pickup locations include Cache Valley and Utah County. Pickup dates and time windows are predefined per drop and displayed before order submission. Payment is collected at pickup.

9. Order Flow

- 1 Customer selects products and quantities (bags)
- 2 Customer selects pickup location
- 3 Customer enters contact information
- 4 Customer optionally joins mailing list
- 5 Order is placed and capacity reserved
- 6 Confirmation email is sent
- 7 Customer pays at pickup

10. Mailing List

Customers may join a mailing list either as a standalone action or during preorder. The mailing list is used exclusively for frozen drop notifications and related updates.

11. Email Notifications

A confirmation email is sent immediately after preorder placement. The email includes order summary, pickup details, and a reminder that payment is collected at pickup.

12. Data Model Overview

Core entities include Drops, Products, Drop Inventory, Pickup Locations, Drop Pickup Options, Customers, Orders, Order Items, Mailing List Subscribers, and Email Logs.

13. UX & Design Principles

- 1 Dark, smoky visual style with warm accent colors
- 2 Logo top-left on desktop, centered on mobile
- 3 Minimal steps and clear expectations
- 4 Trust-first messaging and layout

14. Future Considerations (Out of Scope for MVP)

- 1 Online payments or deposits
- 2 Accounting system integrations
- 3 Admin dashboards
- 4 SMS notifications or waitlists
